Index for The Computer Journal, Volume 29

1. Index of Titles of Papers, etc.

Alternative scope rules for block-structured languages 253
Analysing the impact of adding a new software system on main memory usage 522
Ariadne-1 blackboard system 235
Attitudes, association and success of MIS: some empirical results from research in the context of a business game 212
Automatic specialisation of standard designs 495
Autumnal quadtrees 472
Axiomatic approach to software metrication through program decomposition 330

Buddy systems with selective splitting 127

Computer tree – the power of parallel computations 103
Computing random fields 373
Curve-smoothing techniques using B-splines 564

Data recording and monitoring for analysis of system response times 396
Data structure and algorithm for a self-augmenting heuristic program 135
Deletion algorithms for coalesced hashing 436
Design of a capability-based operating system 289
Dewey indexing of Prolog traces 17
Distributed synchronisation scheme for communicating processes 109
DSA – a tool for descriptive text analysis 460
Dynamic approach towards software science 189

EFDM: extended functional data model 38
Electre: a language for control structuring in real time 229
Empirical evaluation of random testing 380
Entity model clustering: structuring a data model by abstraction 348
Enumerating, ranking and unranking binary trees 171
Expected distribution of degrees in random binary search trees 36
Experiences of 'literate programming' using cweb (a variant of Knuth's WEB) 201

Finding response times in a real-time system 390
Fundamental errors in legal logic programming 545

Generation of cryptic crossword clues 282

Hierarchy of program control structures 24

IBM makes usability as important as functionality 475
Improving output from research (in the domain knowledge base systems) 572
Implementations of the CSP notation for concurrent systems 500
Implications of SGML for the preparation of scientific publications 193
Index database machine 451

Join dependencies in relational databases and the geometry of spatial grids 378

Knowledge-engineering approach to instructional design 385
Knowledge representation with attribute grammars 241

Letter-oriented minimal perfect hashing scheme 277
Locally correctable B-tree implementation 269

New technique for automatic contouring and contour representation from machine-readable spatial data 467
Non-classical logic for information retrieval 481

On the choice of grammar and parser for the compact analytical encoding of programs 307

Parity check codes for logic processors 12
Password-capability system 1
Path problems in structured graphs 553
Performance study of a centralized Concurrency Control algorithm for distributed database systems using SIMULA 118
Philosophy for the teaching of computer science and information technology 83
Program generators and generation software 315
Programming a bounded buffer using the *object* and *path expression* constructs of Path Pascal 423
Proof system for Ada Tasks 404

Quadtrees: storage and scan conversion 60

Rapid generation of a class of software tools 151
Recognizing multivalued dependencies in relation schemes 458
Rectangular point location in *d* dimensions with applications 76
Recursive algorithm for the optimal solution of a complex allocation problem using a dynamic programming formulation 182
Resources needed for a university computer science department 90
Reve's puzzle 187
Review of methods for measuring and describing users' attitudes as an essential constituent of systems analysis and design 97

Segregation of incompatible duties 9
Semantics of new while loop 33
Sequential vs. binary batched searching 368
Some practical principles for design of maintainable systems 20
Specification of a relational database (PRECI) as an abstract data type and its realisation in HOPE 261
Structural stability of corporate and devolved databases 361
Structure-directed total correctness proof rule for recursive procedure calls 531
System and program models of storage allocation for reducing seek delay 47
System design and structuring 300

Techniques of program design 434
Towards a framework to choose appropriate I.S. approaches 222
Towards a problem-solving methodology for coping with increasing complexity: an engineering approach 161
Translating Pascal for execution on a Prolog-based system 246
Two tools for interprocess communication in distributed data-flow systems 506
Type checking in polymorphic languages 538

UFL: an experimental frame language based on abstract data types 340
UNIX-based system for software configuration management 527
Use of doubly chained tree structures in file organisation for optimal searching 52
Use of mean distance between overflow records to compute average search lengths in hash files with open addressing 167
Use of termination indicators in computer programming 430
Using B-trees to solve geographic range queries 176

Validating microcode algebraically 416
VLSI and WSI associative string processors for cost-effective parallel processing 486

Weighted mark scaling algorithm 477
Well-formed conversion of unstructured one-in/one-out schemes for complexity measurement and program maintenance 322
Writing self-replicating code 573

3. Index of Topics, etc.

Ada programming language 404
Ada tasking constructs, proof system for 404
Algol-60 programming language 253
Algorithms
  centralized Concurrency Control 118
  deletion 436
  for coalesced hashing 436
  for self-augmenting heuristic program 135
  geographic range queries 176
  optimal solution of complex allocation problem 182
  sweep 292
  weighted mark-scaling 477
Amoeba file system 296
Analytical encoding, choice of grammar and parser for 307
Ariadne-1 blackboard system 235
Associative string processor 486
  activation functions 489
  active procedures 490
  configurations 490
  current projects 493
  integration 492
  software 490
Attitudes
  identification and measurement 97
  organisation of 100
  role in individual's view of the world 99
  toward, associations with, and success of MIS 212
Attribute grammars, knowledge representation with 241

B-splines, curve-smoothing techniques using 564
B-trees *see* Tree structures
Binary search trees 36
Blackboard systems
  Ariadne-1 235
  Hearsay-II 235
  Hearsay-III 235
  OPM 235
Boolean retrieval 482
British Nationality Act (1981) 545
Buddy systems
  for dynamic storage allocation 127
  outline of 128
  weighted 131
  with selective splitting 127
Buffered inputs in real-time systems 392
Buffers, bounded 423
Business games, research results 212

C programming language 201
Chinese remainder theorem 277
Clustering, entity models 348
Coalesced hashing
  early insertion (EICH) 436
  late insertion (LICH) 436
  variants of 436
  varied insertion (VICH) 436
Communicating Data Flow Channels (CDFC) 506
  comparison with DDFC 520
  description of language 507
  implementation of simulators 517
  implementation schemes for 512
Communicating sequential processes
  for concurrent systems 500
  implementations 502
  language 502
  output guards 502
  overview of 500
  proposed enhancements 501
  synchronisation and nondeterminism 502
Communication primitives and protocols 290
Communications, distributed synchronisation scheme 109
Computer science
  resources needed for university department 90
  teaching 83
Computer systems, analytic model of 80
Computer Tree (CT) 103
Concurrent systems, CSP notation for 500
Contour information, computing, storing and retrieving 467
Contour processing procedure 470
Control systems, synchronisation conditions of real-time applications 229
Co-ordination level matching 482
COSPOL programming language 502
Crosswords, cryptic clue generation 282
CSP/80 programming language 503
Curve-smoothing techniques using B-splines 564
cweb programming language 201
Cylinder Assignment Model 50

DAPLEX language 38
Data, distribution between files 22
Data Analysis Approach to IS 223
Data design, principles of 20
Data flow actors 507
Data flow computers 506
Data flow execution mechanism 507
Data flow machine architecture 507
Data flow systems, interprocess communication in 506
Data modelling by abstraction 348
Data monitoring, for analysis of response times 396
Data recording, for analysis of response times 396
Data relation model 458
Data structures
  B-tree 269
  EFDM 43
  for self-augmenting heuristic program 135
  LB-trees 269
  letter-oriented minimal perfect hashing scheme 277
  quadtree 177
  quadtree storage and scan conversion 60
  rectangular point location, d-dimensions with applications 76
Data substructures, JSP 434
Data types
  abstract 340
  in CDFC and DDFC 508
  primitive 508
  properties at abstract level 261
  structured 508
Data values, types of 539
Database generator 460
Database Management System Model 361
Databases
  B-trees to solve geographic range queries 176
  centralized Concurrency Control algorithm 118
  changes to computer application systems 363, 364
  classifications of users 362
  corporate 361, 362, 365
  devolved 361, 362, 365
  EFDM (Extended Function Data Model) 38
  entity model clustering 348
  file organisation for optimal searching 52
  generation and interrogation 465
  index database machine 451
  join dependencies in 378
  PRECI canonical 261
  restructuring mechanism 361, 366
  restructuring strategies 366
  search lengths in hash files with open addressing 167
  sequential vs. binary batched searching 368
  storage allocation for reducing seek delay 47
  structural stability 361
Derivation encoding 307
Description structure analyser 460
Descriptive text processing tool 460
Design specialisation 496
Design specification, automatic specialisation 495
Dewey decimal indexing 17
Disk storage devices, storage and placement of files on 47

Distributed Data Flow Channels (DDFC) 506
comparison with CDFC 520
description of language 507
implementation of simulators 517
implementation schemes for 512
Distributed systems
capability-based 289
centralized Concurrency Control 118
structuring techniques 301
synchronisation scheme for communicating processes 109
DSA (Description Structure Analyser) 460
DTM (Digital Terrain Model) 467
Dynamic storage allocation, buddy systems for 127

EFDM (Extended Functional Data Model) 38
Electre programming language 229
Electronic publishing
literate programming using cweb 201
Standard Generalized Markup Language (SGML) 193
Entity model clustering 348
Entity modelling techniques 348
Equivalence relations, alternative type 541
Error control, parity check codes for 12
ETHICS approach to IS 222
Expanding formats, program design for 21
Expert systems
Ariadne-1 blackboard system 235
knowledge base 572
knowledge representation with attribute grammars 241
self-augmenting heuristic program 135

Fault tolerance 289
Flow charts, hierarchy of 26
FORCE macro 275
FORTRAN-77 33
Functional dependencies (FDs) 458
Functionality and usability 475

Generation software 315
Geographic Information Systems (GIS) 176
Graphics
curve-smoothing techniques using B-splines 564
mesh generation 373
path problems in structured graphics 553
see also Structured graphs

Hash files with open addressing, average search lengths for 167
Hashing, coalesced *see* Coalesced hashing
Hashing *see under* Data structures; Databases
Hearsay-II blackboard system 235
Hearsay-III blackboard system 235
Homomorphisms
evaluation of 418
examples of 419
HOPE language 261
Human Activity Systems Approach to IS 222

IBM PC microcomputer 475
Incompatible functions
determination of 9
segregation of 9
Index database machine 451
Indexing, Dewey decimal 17
Information retrieval 52
classical 481
conditional logic for 483
non-classical logic for 481
Information systems
attitudes, association and success of 212
choice of appropriate approaches 222
questionnaire report 220
Information technology, teaching 83
Input/output behaviour model 47
Instructional design, knowledge engineering in 385
Intelligent interrogation system 460
Internal control system 9

Join dependencies 378
N-dimensional 379
polygonal 379
polyhedral 379
triangular 378
JSP program design method 434

Knowledge base systems, improving output from research 572
Knowledge engineering in instructional design 385
Knowledge representation with attribute grammars 241

Latency delay 488
Legal local programming 545
LEX, self-augmenting heuristic program 135
Literate programming using cweb 201
Logic, of uncertainty 484
Logic processors, parity check codes for 12
Logic programming
fundamental errors in 545
legal 545
Logics in information retrieval 481

Maintainable systems, program design for 20
Management information systems *see* Information systems
Mark-scaling algorithm 477
Match delay 488
Memory fragmentation, reduction of 127
Memory management, simulation study for 132
Memory usage, simulation model for 522
Memory usage and software systems 522
Mesh generation 373
Mesh refinement 373
Metrication
axioms for 344
of software 330
Microcode, validating algebraically 416
Microcomputer, IBM PC 475
Microcomputers, usability and functionality 475
Money mechanism 1
Multiple processor systems 393
Multiprocessor, tightly coupled 1
Multivalued dependencies (MVDs) 458

Networks, path problems in structured graphs 553
New while-loop 33

Object expression constructs 423
Occam programming language 504, 506
Operating systems
capability-based distributed 289
UNIX 527
OPM blackboard system 235

PAL programming language 261
Parallel computation 103
Parallel processing
two-level index-tree for 451
VLSI and WSI architecture 486
VLSI and WSI associative string processors for 486
Parity check codes for logic processors 12
Parsing encoding 307
Participative System Design (ETHICS) Approach to IS 222
Pascal programming language 246
Password-capability system 1
Path expression constructs 423
Path Pascal programming language 423
Path problems in structured graphs 553
Polymorphic languages, type checking in 538
Port layer 291
PRECI canonical database 261
Probabilistic retrieval 483
Problem transformation 434
Problem-solving activities, blackboard architecture for 235
Problem-solving methodology, increasing complexity 161
Problem-solving strategies, recursive 182
Profile creation 464
Profile creation module 463
Profile refinement 464
Profile refinement module 463
Program control, hierarchy of structures 24

Program design
for expanding formats 21
for maintainable systems 20
Program generators 315
applicability of 316
detailed structure of 317
dialogue design 318
example dialogue 320
outline of 316
Programming and programs
bounded buffer using object and path expression constructs 423
compact analytical encoding 307
complexity measurement and maintenance 322
conversion from non-structured to equivalent structured 322
cryptic crossword clues 282
decomposition hierarchy 330
design and structuring 300
design techniques 434
dynamic programming formulation 182
legal logic 545
LEX 135
non-trivial self-replicating 573
problem-solving methodology 161
rapid generation of class of software tools 151
self-augmenting heuristic 135
termination indicators 430
total correctness proof rules for recursive procedure calls 531
translating Pascal for execution on Prolog-based system 246
